Subject: Do you still have Sam's computer?

Ryan, Cheryl,

As difficult as it was to get drinking water systems names (I now have them from Rita Bair; Rita also showed me an alternative way to get the names without going into SDWIS), it will be even more trickier to get Sam's data. If you look at his email at the bottom of the email string, he left it for me on EPA ArcGIS Online Organization, otherwise known as the GeoPlatform. Putting data on the GeoPlatform might seem like a good idea at the time in that it allows everyone with an account to be able to view the data, but there is only one person in the region that has admin rights to retrieve the data (I cannot retrieve Sam's data from GeoPlatform). That person is Paisly Kauth, and you can see by her email below that I would be better off working with Sam's original spreadsheet directly rather than what happens to the spreadsheet when it gets posted to the GeoPlatform.

Do you have Sam's original data, be it for well depth and nutrient concentrations or whatever else? Did he send you his data as opposed to posting it for you to see on the GeoPlatform. If not, then the way forward on my mapping his data will be to put in a call to 3help to access his files from his computer (3help would have backed up his files). Is the computer assigned to Sam still in your Branch? Has 3help come to retrieve it?

Milo

Milo:

He has saved it as a feature collection saved as part of the map. Do you have his original spreadsheet? You would be better off using his spreadsheet directly in ArcMap.

Thanks.
-P.

Hi Paisly,

The email below is from a WD summer intern who worked with Water Enforcement, and he left me some GIS layers for me to look at on the geoplatform. I was able to view them okay, and I posed the question to Jan if I could download the layers he posted for use in ArcGIS. Jan suggested that you might have administrative rights to do this.

Not critical or a rush (I can actually get by without the layers), but would you be able (if you find time) to pull off the layers Sam posted to the geoplatform and send them to me? I have no idea what format the data was in that he posted (lyr vs. feature class).

Thanks, Milo

Subject: Central Sands Dairy Information

Hi Milo,

The layer I made with all the CSD fields highlighted is called "CSD Fields" and is on the EPA ArcGIS Online Organization. The layer with all the potential sample points is called "CSD Complaint/Sample Sites." I added the depths of the wells I was able to find online. I will be talking to our local contact to see if any of the private homeowners are willing to provide the depth of their wells. Let me know if you need anything else. Thanks.

Sam
